Introducing **Kolortuff**TM by IGA

Create a custom color, or choose from 10 standard colors of KolortuffTM coated glass for use on kitchen island tops, countertops, bar tops, wet bars, desktops, tabletops, and bathroom vanity tops. When viewed through the glass thickness, the color takes on it's own dimensional quality, unlike any other solid surface available. The silicone based coating on the under side of the glass is U-V resistant and has a ten year warranty against fading and discoloration.

Edgework options further enhance the individuality of the glass tabletop or countertop. Each one has a unique effect in creating shadow and depth to the glass when combined with various lighting effects. All glass can be fabricated with notches, holes, electrical cutouts, and sink and stove cutouts similiar to that of granite or stone applications. Guidelines for templating and installation are available. Glass should always be installed by a qualified glass professional.

Colors may vary slightly from those represented on the color chart and may vary from production run to production run. Custom colors are available for a one time color match fee. Countertops can be fabricated in 1/2" or 3/4" thick glass. Matching solid surface backsplashes are typically produced in 1/4" glass, but any thickness of glass is suitable for coating.
